

I had the privilege of supervising Lim Charles during his ITE internship at our company, and his performance was nothing short of exceptional. From the outset, Lim Charles demonstrated a remarkable ability to apply the fundamentals he learned at ITE, quickly grasping and implementing new technologies across multiple domains.

One of Lim Charles's standout qualities was their receptiveness to feedback, particularly in improving their presentation skills for security awareness training. By the end of the internship, they were delivering clear and interesting sessions that effectively communicated cyber security concepts to non-cyber-trained members.

Lim Charles demonstrated a keen interest in exploring new ideas in cybersecurity, particularly in creating vulnerable virtual machines for our cyber range. They rose to this challenge admirably, effectively incorporating the MITRE ATT&CK framework into their work. This project not only demonstrated their technical skills but also their capacity to apply theoretical knowledge to practical scenarios.

As part of their learning experience, we assigned Lim Charles to research emerging technologies, with a focus on machine learning in cybersecurity. Lim Charles spent time researching and even testing techniques to exploit machine learning models, demonstrating a forward-thinking approach that will serve them well in their future career.

Lim Charles's combination of technical aptitude, eagerness to learn, and collaborative spirit made them a valuable member of our team during their internship. They have laid a strong foundation for a promising career in cybersecurity, and I am confident they will excel in their future endeavors in this field.
